Subject: RE: BTEX-N and propylene glycol at Wellington

Jim,

Those parameters (propylene glycol and BTEX-N) are still being monitored at the Wellington Prep Plant. Lab results are kept on file but not reported in the electronic database. I believe that, originally, there were not parameter numbers assigned to those, so they couldn't be entered electronically, and the requirement with the Division was just to keep the records in the official files. Patrick Collins at Mt. Nebo Scientific maintains those, and they are made available to the Division inspectors for their review. (All reports have been at non-detect levels.)

I believe that Dana Dean asked the same question of Patrick last year, and they decided that the existing record keeping was fine. But, you could check with Patrick on that to double-check.

I did not include Mike Glasson at Andalex in this reply, because I think it must have been a mistake that he was included in your original email rather than Patrick. (But, then again, maybe you know something I don't!)

Hope this clarifies things -- let me or Patrick know if you need more information.

Karla,

According to the monitoring plan in the MRP, in addition to the parameters listed in Tables 7.24-2 and 7.24-5, the Permittee must report analysis

results for benzene, toluene, ethylbenzene, xylene, naphthalene, and propylene glycol for GW-4, GW-5, SW-4, and SW-5 (when there is adequate water to collect a sample, of course). This has not been done for several years. Am I missing something in the MRP that has removed these parameters from the monitoring requirements?
